### Job Description

We are seeking a highly skilled Project Manager (PM) to join our IT Integration Project team, focusing on Validated Systems, including Global and Local Quality and Lab (GxP) applications and systems. The ideal candidate will have extensive experience in GxP-regulated environments and laboratory applications, ensuring seamless system integration and compliance. This role is hybrid and requires the PM to be based on the US West Coast, with on-site presence every two weeks.

### Key Responsibilities:

- Define the size, cost, and duration of integrating six global and 30+ local applications.
- Identify key requirements and risks for the validated systems integration.
- Confirm system, process, and data owners for each validated application.
- Engage with local site teams to drive the transition of local lab applications to local ownership.
- Oversee domain changes for the 30+ local applications, ensuring alignment
- Drive the validation documentation updates post-integration.

### Requirements

- Strong Project Management experience in IT integration projects.
- GxP & Laboratory Systems expertise (quality, compliance, and validation in a regulated environment).
- Experience with global and local application ownership transitions in a pharmaceutical or biotech setting.
- Ability to work cross-functionally with IT, manufacturing, quality, and regulatory teams.
- Strong understanding of validation processes and compliance documentation.
- Excellent communication and stakeholder management skills.
- Must be based on the US West Coast and able to be on-site every two weeks.
- Fluency in English.
